Drying rice process

Drying rice plants that occur from problems in the moisture of rice in the country. By some farmers to sell rice to the mill. Especially when the flood of Agriculture will soon be selling rice to dry with no time to dry before making the rice as raw material in production is high humidity and musty smell of easy. The company is thinking how to prevent rice with high moisture and smell. Is to create high-quality rice drying plant is automatically controlled by PLC system to get all the paddy with moisture minimal. Rice has also made high-quality meets customer needs. The company is currently in the drying of rice per day to 500 tons
